

2025 WATER QUALITY REPORT FOR Brooklyn Water Department

This report contains important information regarding the water quality in our water system. The source of our water is groundwater. All of the water is purchased. Purchased water comes from Poweshiek Water Association. Our water quality testing shows the following results:

CONTAMINANT	MCL-(MCLG)	Compliance		Date	Violation Yes / No	Source
		Type	Value & Range			
<i>Copper (ppm)</i>	AL = 1.3 (1.3)	90 th	0.0113 (0300360-0.0131)	2024	No	Corrosion of household plumbing systems; Erosion of natural deposits; Leaching from wood preservatives
<i>Lead (ppb)</i>	AL =15 (0)	90 th	ND	2024	No	Corrosion of household plumbing systems; erosion of natural deposits
950 DISTRIBUTION SYSTEM						
<i>Chlorine (ppm)</i>	MRDL = 4.0 (MRDLG = 4.0)	RAA	1.9 (1.65-2.2)	12/31/25	No	Water additives used to control microbes
<i>Total Trihalomethanes (ppb) TTHM</i>	80 (N/A)	LRAA	48 (48-48)	9/30/25	No	By products of drinking water disinfection
<i>Total Haloacetic Acids (ppb) HAA5</i>	60 (N/A)	LRAA	27 (27-27)	9/30/25	No	By products of drinking water disinfection
CONTAMINANT	MCL-(MCLG)	Type	Compliance Value & (Range)	Date	Violation Yes / No	Source
8670701 – Poweshiek	Water Association					
01 – WELLS #1-#14	@LAB FAUCET					
<i>Barium</i>	2 (2)	SGL	0.0097	4/11/22	No	Discharge from drilling waste & metal refineries; erosion of natural deposits
<i>Selenium (ppb)</i>	50 (50)	SGL	1.7	4/11/22	No	Discharge from petroleum & metal refineries & mines, erosion natural deposits
<i>Sodium (ppm)</i>	N/A (N/A)	SGL	12.8	4/1/25	No	Erosion of natural deposits; added to water during treatment process
<i>Fluoride</i>	4 (4)	SGL	0.1	04/11/2022	No	Water additive that promotes strong teeth; Erosion of natural deposits, Discharge from fertilizer & aluminum factories
<i>Nitrate as N (ppm)</i>	10 (10)	SGL	0.1	2025	No	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits
<i>Chromium (ppb)</i>	100 (100)	SGL	2.5	4/1/22	No	UCMR4 random systems selected by EPA to determine regulations

Note: Contaminants with dates indicate results from the most recent testing done in accordance with regulations.

DEFINITIONS

- Maximum Contaminant Level (MCL) -- The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
- Maximum Contaminant Level Goal (MCLG) -- The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
- ppb -- parts per billion.
- ppm -- parts per million.
- pCi/L – picocuries per liter
- N/A – Not applicable
- ND -- Not detected
- RAA – Running Annual Average
- SGL—single sample result
- Treatment Technique (TT) – A required process intended to reduce the level of a contaminant in drinking water.
- Action Level (AL) – The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
- Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
- Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
- NTU – Nephelometric Turbidity Units measures amount of turbidity in water. Turbidity is a measure of cloudiness.
- RTCR-Revised Total Coliform Rule

GENERAL INFORMATION

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water posed a health risk. More information about contaminants or potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Lead can cause serious health effects in people of all ages, especially pregnant women, infants (both formula-fed and breastfed), and young children. Lead in drinking water is primarily from materials and parts used in service lines and in-home plumbing. Our water supply is responsible for providing high quality drinking water and removing lead pipes but cannot control the variety of materials used in the plumbing of your home. Because lead levels may vary over time, lead exposure is possible even when your tap sampling results do not detect lead at one point in time. You can help protect yourself and your family by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Using a filter, certified by an American National Standards Institute accredited certifier to reduce lead, is effective in reducing lead exposures. Follow the instructions provided with the filter to ensure the filter is used properly. Use only cold water for drinking, cooking, and making baby formula. Boiling water does not remove lead from water. Before using tap water for drinking, cooking or making baby formulas, flush your pipes for several minutes. You can do this by running your tap, taking a shower, doing laundry or a load of dishes. If you have a lead service line or galvanized requiring replacement service line, you may need to flush your pipes for a longer period. If you are concerned about lead in your water and wish to have your water tested, contact BROOKLYN WATER DEPARTMENT at 641-522-7066. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available <https://www.epa.gov/safewater/lead>.

Lead tap sampling data can be found in the Iowa Drinking Water Data Portal: <https://programs.iowadnr.gov/iowadrinkingwater>. Our water supply has completed a service line inventory. Please contact us for information regarding the inventory and how you can access the results.

SOURCE WATER ASSESSMENT INFORMATION

This water supply obtains some or all of its water from another public water supply. It is a consecutive water supply, where an originating parent supply provides drinking water to one or more downstream supplies.

Original Supply ID	Original Supply Name
1A8670701	Poweshiek Water Association

CONTACT INFORMATION

For questions regarding this information, please contact BROOKLYN WATER DEPARTMENT at (641) 522-7066 during the following hours: 7:00am – 4:00pm. You may receive a copy of the Consumer Confidence Report at City Hall.

Decisions regarding the water system are made at the Brooklyn City Council meetings held on the first and third Mondays of the month at 6:00 p.m. at 138 Jackson Street and are open to the public.
